Question 1

i). True –

consider the school database system. there can be entities like students, exam, subject etc. They can relate to each other. But the building entity in the school entity does not need to relate to student details, exam details or anything other.

ii). True –

Facts about entities are work as attributes. Attributes are information about entities. consider the school database. It has a student entity and attributes relevant to students like name, NIC are facts about the student entity.

iii). True –

In this case Product Launch can be considered an Event entity. This entity could have attributes such as Event ID, Product, Launch Date etc.

iv). False –

An entity instance is a single occurrence of an entity. so this statement false.

v). True –

Attributes in an entity class work as facts about the entity and it helps to understand how the entity has made.
